DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to Oxygen sensor abnormality detecting device applying first and second offset voltages, classified in class 73, subclass 1.06.
- II. Claims 15-17, drawn to Oxygen sensor abnormality detecting device wherein an offset voltage is set to be lower than the high voltage-side shorting determination value, classified in class 123, subclass 688.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require applying offset voltage lower than high voltage-side shorting determination value. The subcombination has separate utility such as discriminating high voltage short from other abnormalities.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
